

**TeamQuest is making
some new music
that you are going
to love hearing!**

TeamQuest

11.1
PF20120301

Turn it up to 11!

These tracks are sure to be big hits:

TeamQuest Surveyor[®]

originally written and produced by Solution Labs, now produced by TeamQuest

TeamQuest Surveyor is an enterprise capacity management solution that easily and rapidly integrates all your data sources — regardless of the vendor or technology — creating a federated Capacity Management Information System (CMIS). TeamQuest Surveyor uses that federated CMIS for automated analysis and reporting. TeamQuest Surveyor saves time, allowing you to embed IT staff expertise into a fully-automated and highly scalable, repeatable capacity management decision support system, replacing ad hoc techniques and homegrown tools.

TeamQuest[®] Administration Console

written and produced by TeamQuest

The TeamQuest Administration Console simplifies and accelerates setup and maintenance of large TeamQuest Capacity Management Information System (CMIS) installations. It replaces the TeamQuest Administration Server for providing single-point administration of the distributed components comprising the TeamQuest CMIS[®]. This new console has an AJAX-based interface and can scale to manage thousands of nodes. TeamQuest Administration Console facilitates easy policy-based management of all those nodes using rules and tags. It also includes the ability to monitor TeamQuest CMIS health.

Microsoft Hyper-V Support for the Distributed TeamQuest CMIS

written and produced by TeamQuest

One of the key advantages of TeamQuest Performance Software is its ability to manage multi-vendor environments. Our software works across a wide variety of hypervisors and operating systems. Now with the Release 11 version of the distributed TeamQuest CMIS, we've added remote agentless collection of performance data from Microsoft Hyper-V environments.
