

Enterprise Performance Management Software

serving Clear Path OS 2200 systems

TeamQuest PMPlus for Clear Path OS 2200 Systems

Manage Your ClearPath
System With a Single Solution

TeamQuest PMPlus (PMPlus) is a comprehensive performance management package customized for Unisys ClearPath IX system users. It bundles performance software for both Unisys 2200 Series systems and UNIX/NT machines, giving you a cross-platform solution.

PMPlus consists of TeamQuest View, TeamQuest Baseline, TeamQuest Probes, and TeamQuest OSAM. The combination of these products provide you with a total performance management solution unique to the ClearPath environment.

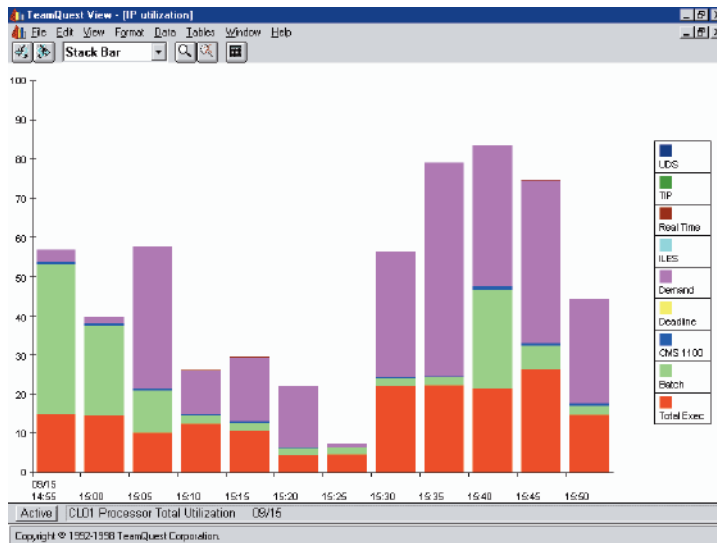

PMPlus gives you the ability to observe and manage the performance of your entire ClearPath system:

- Pinpoint problem areas with hardware utilization
- Identify opportunities for more efficient use of resources
- Identify who or what is causing system slowdowns
- Uncover patterns in resource usage
- Better determine capacity needs

Note: the data-collector for PMPlus gathers statistics on CPU utilization, I/O usage, memory usage, disk space utilization, SUPs utilization, MAPPER applications, DCP utilization, TIP usage, network file system, TCP/IP, Sybase and Oracle database applications (UNIX systems only), and any application that is instrumented to collect performance-related statistics. The data collector is integrated with management consoles, including HP OpenView, IBM NetView/6000, SunNet Manager, and Tivoli/Enterprise Console.

The TeamQuest Clear Path OS 2200 Series Software family includes products in several categories:

Performance Analysis and Capacity Planning • Modeling • System Management • Tools and Utilities

TeamQuest PMPlus lets you analyze overall system utilization (left), process detail, and active users.

Built-In Analysis

- Continuously monitor vital system indicators and be alerted to potential problems before they become critical
- Pinpoint cause-effect relationships between system activities
- Drill-down from any point on a graph down to the users and processes active at that particular time
- Use trend analysis to find cycles in system behavior

Flexible Interface

- Combine data from the resources being used and the applications using them into a single source for information, investigation and reporting
- Analyze data on 2200 Series, UNIX, NT, and ClearPath with a single interface
- Adjust the user interface to depict the information the way you want to see it
- View side-by-side comparisons of before and after activity seamlessly in charts and graphs

Data Collection and Analysis

- Maintain a compact historical record of system performance behavior and application components
- Analyze data from IOTRACE, TIP, UDS, MCB, and MAPPER activity, as well as CPU, memory, I/O, disk, network, process, system log, and operating system internals
- Group system activity by common characteristic, such as by user, account, code, and more
- Add your own mission critical statistics unique to your system to monitor and analyze along with all other statistics
- Derive custom statistics from data that is stored in the performance database

Past and Present Reporting

- Monitor performance on your system as it happens
- Examine data over time
- Reports performance at the run and user, program and process levels
- Uncover patterns in resource usage
- Determine capacity needs
