

TEAMQUEST® PERFORMANCE SOFTWARE AND SERVICES

Optimize IT services with performance analysis and capacity planning software

- ✓ Powerful cross-silo analytics
- ✓ Cloud scalability
- ✓ Fast ROI
- ✓ Cost-effective flexibility

The Suite

 TeamQuest Analyzer®	 TeamQuest Surveyor®	 TeamQuest Predictor®	 TeamQuest CMIS®	 TeamQuest® Global Services
IT performance analysis software	Enterprise capacity management software	Capacity planning software	Distributed Capacity Management Information System	Capacity Management Services

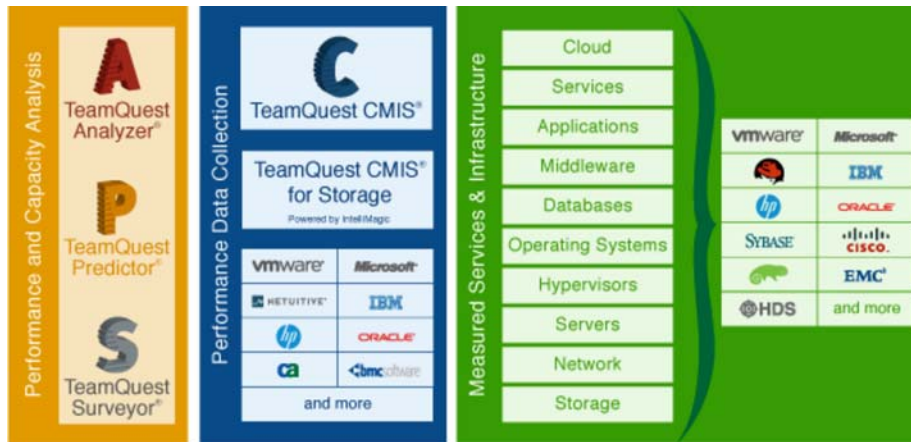

TeamQuest® Software for Unisys ClearPath OS 2200 & MCP Systems

Benefits

- Save time and money
- Optimize business and IT service performance
- Consistently meet service levels
- Mitigate service delivery risks
- Align IT and business objectives
- Improve efficiency
- Increase business productivity

How it works

The TeamQuest suite consists of three capacity analysis and performance management products that work in conjunction with a fourth product known as TeamQuest CMIS (Capacity Management Information System).

TeamQuest Performance Software Architecture Diagram

TeamQuest CMIS provides data collection, event monitoring, and an automated analytics engine along with a distributed performance management database. In addition to analyzing information from the TeamQuest CMIS, the TeamQuest Surveyor product is able to analyze data stored in virtually any SQL-based data store, including performance databases that are built and maintained by third party or custom in-house tools.

Why it's better

- Powerful analytics, including highly scalable predictive capabilities based on a fast, automated, and accurate analytic queuing network solver that nobody else has
- Cloud scalability, proven by installations at Fortune 100 companies optimizing capacity in highly dynamic service-oriented environments with over 40,000 physical and virtual systems
- Fast ROI, through out-of-the box intelligence, installed in minutes and integrated with the performance and capacity tools you already have in place
- Vendor-agnostic solution for physical servers, virtual servers, and storage systems
- True service perspective, integrating data spanning all technologies, as well as business, service and financial sources, without requiring data replication into yet another data store
- Cost-effective flexibility, through customized analysis, reporting and drag-and-drop metric integration - no lengthy and expensive consulting services required
- Single integrated, cross-silo solution, enabling wide-ranging enterprise reporting analysis AND drill down to the diagnostic details you need to solve real problems
